A; Residues: 1449-1465, 'A' <TSI>A; Residues: 1449-1465, 'E', 1465-1495, 'A' <TSI>A; Residues: 1491-1465, 'E', 1465-1495, 'A' <TSI>A; Cross-references: GB: 030551, NID: 9179695, PIDN: AAA51858.1; PID: 9179696
A; Note: the authors translated the codon GAA for residue 1460 as Gln, and GAG for residu C; Comment: Prolines and lysines at the third position of the tripeptide repeating unit (are 5-hydroxylated and subsequently O-glycosylated.
C; Comment: The amino-terminal propeptide domain appears not to be completely cleaved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A;Cross-references: GDB:119064; CMIM:120190

Arch. Blochem. Blophys. 384:37-46(2000).
-!- FUNCTION: Type I collagen is a member of group I collagen
(fibrillar forming collagen).
-!- SUBUNIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.
-!- PTM: Profiles at the third position of the tripeptide repeating
unit (G-X-Y) are hydroxylated in some or all of the chains.
-!- DISEASE: Defects in COLIA1 are a cause of osteogenesis imperfecta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disease mutation; Extracellular matrix;

WEDLINE-88124276, PubMed=3340560;
Mooslehner K., Harbers K.;
Mooslehner K., Harbers K.;
Two mRNAs of mouse pro alpha 1(I) collagen gene differ in the size of RT Two mRNAs of mouse pro alpha 1(I) collagen is a member of group I collagen

CC (fibrillar forming collagen):
CC (fibrillar forming collagen)
CC (1: SUBUNIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.
CC -: TISSUE SPECIFICITY: Forms the fibrils of tendon, ligaments and bones. In bones the fibrils are mineralized with calcium

Nutrinavanatite.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -!- PTM: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains.
-!- SIMILARITY: Belongs to the fibrillar collagen family.
-!- SIMILARITY: Contains 1 VWFC domain.

"Nucleotide sequence of a collagen cDNA-fragment coding for the carboxyl end of pro alpha 1(1)-chains.";

FEBS Lett. 11:61-66(1980).

-!- FUNCTION: Type I collagen is a member of group I collagen

(fibrillar forming collagen).

-!- SUBMINT Trimers of one alpha 2(1) and two alpha 1(1) chains.

-!- SUBMINT Trimers of one alpha 2(1) and two alpha 1(1) chains.

-!- TISSUE SPECIFICITY: Forms the fibrils of tendon, ligaments and bones. In bones the fibrils are mineralized with calcium
                                                                                                                                                                  ຸ້
